

This plane is a trick plane.
If you fold it carefully, it will "roll" as it flies.

Start with a **SQUARE** piece of paper (8 1/2 inches square). You can use a ruler and cut it square or have an adult help you.

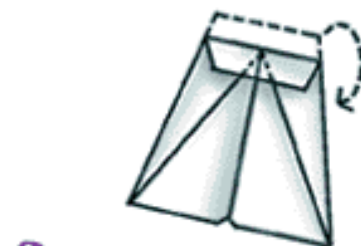

Step 1

Fold the paper in half.

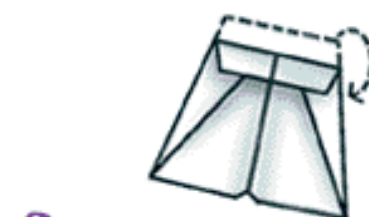

Step 2

Fold the top corners in like this.

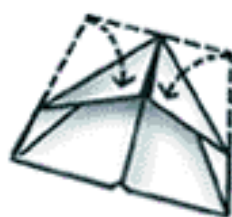

Step 3

Fold the top down where the corners meet like this.

Step 4

Then fold the top over again like this.

Step 5

Fold the top corners in again like this.

Step 6

Turn the paper over and fold it in half along the center like this. Place a small piece of tape at the bottom.

Step 7

Fold the wings down along the lines shown in this picture.

Step 8

Put a paper clip along the bottom and hit the skies!
